

Paessler to Highlight VMware Performance Monitoring at VMworld 2017

Attendees will learn how PRTG can effectively monitor every detail of a virtual environment

WAKEFIELD, Mass. And NUREMBERG, Germany, August 27, 2017 – [Paessler AG](#), the innovative network monitoring specialist, today announced that the company will provide demonstrations of PRTG and its VMware monitoring capabilities at the Paessler booth, #1120, at VMworld – held August 27-31, 2017 at the Mandalay Bay Hotel and Convention Center in Las Vegas.

PRTG Network Monitor enables IT administrators to continuously monitor the health and performance of their entire infrastructure, including cloud and virtualized components. Additionally, PRTG has purpose-built sensors designed to monitor [VMware](#) servers and virtual machines, helping administrators track CPU, disk usage and the impact on the network. It is critical to monitor the effect virtual machines have on network performance and to right-size virtual machines so that resources are not wasted. Paessler staff will be on-hand at the show to demonstrate how PRTG's VMware performance monitoring can optimize virtual environments.

"Paessler attained VMware Ready status, the ultimate stamp of approval from VMware and the highest level of achievement available to members of VMware's Technology Alliance Partner (TAP) program," said Dirk Paessler, founder CEO of Paessler. "Our VMware monitoring, which will be on display at VMworld 2017, allows you to keep a constant eye on important performance data of your virtual machines, which is important because virtualization is a crucial part of so many IT environments."
