

Paessler to Unveil New Feature at Cisco Live

Company will highlight key product upgrade, demonstrate the power of PRTG Network Monitor at Booth #2745

WAKEFIELD, Mass. And NUREMBERG, Germany, July 7, 2016 – [Paessler AG](#), the innovative network monitoring specialist, today announced they will be demonstrating a new feature for PRTG Network Monitor at Cisco Live in Las Vegas, July 10 – 14, 2016, at the Mandalay Bay Convention Center (Booth #2745). Paessler will be displaying its new System Information feature, which gives administrators detailed information on all devices on their network in an easy-to-view format.

PRTG Network Monitor is a comprehensive monitoring solution that is fully-featured at all licensing levels, giving administrators the power to monitor everything in their infrastructure. With the new System Information feature, a detailed rundown of any device that supports Windows or has SNMP enabled will be available through the PRTG dashboard without any need to find the individual device, saving administrators time and making it simpler to organize. From a separate tab off the main web interface, users can find device information ranging from the basics such as IP address and BIOS to seeing what hardware is connected, software installed, what user accounts are active and what processes are running, all without needing to find each individual device itself. This is an enormous time-saver for IT departments and will lead to faster problem-solving.

“With every new version and upgrade to PRTG, we strive to make life that much easier for IT administrators. From our perspective, every minute we save them is time well spent,” said Andrew Cutting, Director of Channel Sales, North America, Paessler. “Cisco Live is a great opportunity for us to unveil our new System Information feature. We’ll be able to demonstrate for a large audience of IT professionals the power and comprehensiveness of PRTG Network Monitor.”
