

Paessler Highlights New Cloud Sensors at IT Nation 2015

Network monitoring firm to showcase new cloud sensors for monitoring Google Analytics, Google Drive, Microsoft OneDrive and Dropbox; Also offering new licensing options for MSPs

WAKEFIELD, Mass., November 09, 2015 – Paessler AG, the innovative network monitoring specialist, today announced a series of new cloud sensors to monitor Google Analytics, Google Drive, Microsoft OneDrive and Dropbox that will be unveiled at IT Nation. Paessler will be exhibiting from Nov. 11-13 at the Hyatt Regency in Orlando, Florida (booth #1005).

PRTG Network Monitor enables IT administrators to continuously monitor the health and performance of their entire infrastructure, including cloud and virtualized components. Paessler engineers will be on-hand at the show to demonstrate how PRTG can benefit SMBs of all sizes and industries.

The new cloud sensors for PRTG will help organizations keep track of the most important values of their cloud services. These sensor types include:

- **Google Analytics Sensor** – enabling users to view the values for all available Google Analytics metrics directly in the sensor's channels.
- **Google Drive Sensor** – enabling users to monitor their cloud drive's free storage in both bytes and percent, as well as trash size in percent.
- **Microsoft OneDrive Sensor** – shows free storage in bytes and percent using the OneDrive API.
- **Dropbox Sensor** – uses the Dropbox API to show free storage in bytes and percent.

“With more and more organizations moving to cloud-based services, it is important for IT administrators to be able to keep close track of cloud services from industry leaders like Google, Microsoft and Dropbox,” said Andrew Cutting, team manager, sales – North America at Paessler AG. “IT Nation is a great venue for reaching IT administrators as they form their 2016 plans for implementing or expanding cloud storage or other cloud services.”

In addition, Paessler recently announced a new “[Monitoring as a Service](#)” option for Managed Service Providers, delivering the benefits of PRTG Network Monitor with a simplified licensing model that empowers MSPs to provide the best possible service for their customers. The new license model allows unlimited usage of core servers and unlimited probes.
