

## Unified Monitoring specialist Paessler to showcase new sensor types at VMworld Europe in Barcelona

London and Nuremberg, Germany, 7 October 2015 – [Paessler AG](#), the IT Unified Monitoring solution provider, today announced that it will be showcasing a number of new sensor types that further enhance the capabilities of PRTG Network Monitor at VMworld Europe.

Paessler will be exhibiting from October 12 to October 15 at Fira Gran Via in Barcelona (Booth E-156).

PRTG Network Monitor enables IT administrators to continuously monitor the health and performance of their entire infrastructure, including cloud and virtualized components. Additionally, PRTG has purpose-built sensors (measuring points) designed to monitor servers and virtual machines, helping administrators track CPU, disk usage and the effect on the network. It is crucial to monitor the effect virtual machines have on network performance and to right-size virtual machines so that resources are not wasted. Paessler engineers will be on-hand at the show to demonstrate PRTG's benefits for VMware users.

One of the new sensors that Paessler will be presenting in Barcelona is the VMware Datastore (SOAP) sensor, which expands PRTG's already comprehensive feature set of [VMware surveillance sensors](#). It monitors the disk usage of a VMware data store, and shows: available capacity in bytes, free space in bytes and percent, and total provisioned disk space in percent among other features.

Also being showcased is Paessler's Common SaaS sensor, which monitors the response times of several common Software as a Service providers, such as Google Apps, Office 365, Salesforce, and GitHub. PRTG adds this sensor to each probe device automatically, and alerts are sent immediately if cloud services are no longer reachable.

Christian Twardawa, Chief Operating Officer at Paessler, said: “Given our reputation for strength and expertise in monitoring virtualised environments, VMworld Europe is the ideal place to announce new iterations of our VMware and SaaS sensors. As SMEs’ IT environment increase in both size and complexity, we have made it our top priority to support both IT administrators, as well as the resellers that serve them, and help them adapt to the network changes associated with scaling up quickly as a business.”

Christian Twardawa, COO, Paessler AG

### ***About Paessler AG***

*Paessler AG's award winning PRTG Network Monitor is a powerful, affordable and easy-to-use Unified Monitoring solution. It is a highly flexible and generic software for monitoring IT infrastructure, already in use at enterprises and organizations of all sizes and industries. Over 150,000 IT administrators in more than 170 countries rely on PRTG and gain peace of mind, confidence and convenience. Founded in 1997 and based in Nuremberg, Germany, Paessler AG remains a privately held company that is recognized as both a member of the Cisco Solution Partner Program and a VMware Technology Alliance Partner.*
