

## **Paessler wins "Network Management Product of the Year" and "Product of the Year" Award at the Network Computing Award 2014**

**London and Nuremberg, Germany, 18th March 2014** - [Paessler AG](#) today announced that its flagship product PRTG Network Monitor has been awarded Network Management Product of the Year and Product of the Year at the 2014 Network Computing Awards, which were held in London on Thursday 13<sup>th</sup> of March. In the "Network Management Product of the Year" category Paessler was nominated together with Emulex, Gigamon, Ipswitch, iTrinegy, SolarWinds, Tripwire and Varonis. Nominated companies in the "Product of the Year" category included Dell, Emulex, IBM, LSI, SolarWinds, Trend Micro and WatchGuard.

The Network Computing Awards, which have been running since 2007, were set up to recognise the IT solutions and companies that are helping organisations to function better by getting the most out of their networks and systems. The winners were selected after a period of voting that was open to customers and the general public.

Christine Lindner, Business Development Manager UK at Paessler, commented: "We are honoured to be recognized for our PRTG Network Monitor with both awards, especially since these are based on a public vote. I believe that these accolades reflect our continued commitment to deliver first-class network monitoring software and high customer satisfaction."

PRTG was also voted runner-up in the category "Testing and Monitoring Product of the Year" and nominated as "Bench Tested Product of the Year".

For a full list of winners and nominees please see:

### **About The Network Computing Awards**

The [Network Computing Awards](#) were set up to recognise the solutions and the companies that have been most impressive in helping organisations function better through getting the most out of their networks. The effectiveness of an organisation depends to a large degree on the performance of its network. How fast does it run? How much downtime does it experience? How well does it cope with running an increasing

number of applications and storing an increasing amount of data? How secure is it? It's fair to say that managing a network is a challenging job. Run by [Network Computing Magazine](#), the awards are customer voted and recognise the best each year from the industry.
